

The purpose of this document is to demonstrate the use of footnotes.¹ What's noteworthy about L^AT_EX footnotes is that the text of the footnote lives in the code at the spot where the superscripted² footnote marker will go in the final document.³

That might seem strange, unless you consider that footnote `\footnote{}` is just an environment like the others we've seen. Where else *would* you put it!?

Endnotes are coded the same as footnotes, only you'll need to add the endnotes package to your preamble and use an `\endnote{}` tag instead of the `\footnote{}` tag. And obviously, endnotes will appear at the end of the document.⁴

¹This is the first footnote.

²The raised number...

³This is the third footnote.

⁴(instead of at the bottom of the page)
